## Load-bearing deck / Massive deck

Are you looking for a really stable floor surface that doesn't need a complicated underlying construction? Do you want it to look natural? Then let our new load-bearing deck STRONG work for you.

Its height of 38 mm means that this massive deck is extremely strong and can be used most diversely, for example as a floor surface for stairs, marinas, pergolas or patios. STRONG is a great option for covering larger gaps – without needing an underlying construction. The deck is optically convincing thanks to its natural wooden grain and is available in brown, anthracite and grey. Its appealing surface is available slightly brushed, or finely striated, thereby looking both natural, but also highly up-market. The decks are screwed according to our manual 'Screwing' (the patio deck screw 5,5 x 80 mm stainless steel must be used). The gap between the decks is between 7-8 mm. Thanks to the wooden composite material the load-bearing deck is not only splinter-free, but also extremely low on maintenance and is therefore highly suitable for your favourite spot outdoors.
